

KOMNicator

for Exchange, GroupWise and the cloud

Komnicator is ALL communication IN ONE place

**Team communication that integrates all data into
your existing email platform or the cloud.**

SKYPRO

ALL in ONE

Komnicator is a revolutionary cross-platform communication tool. It connects to all modern communication channels and integrates all information into your email/collaboration system or the cloud. Like a professional personal assistant Komnicator saves and manages your communication between different channels, protocols and media.

Key features:

- ▶ Post and monitor Facebook, Twitter, G+, LinkedIn
- ▶ Schedule posts on all platforms
- ▶ Connect with VoIP
- ▶ Chat with Facebook Google Talk, Novell Messenger, Lync/Skype, ICQ and more...
- ▶ Connect to Salesforce
- ▶ Connect with Lync/Skype
- ▶ Multi-channel presence information
- ▶ Send text messages (SKySMS compatible)
- ▶ Multi-platform chat windows
- ▶ Exchange, GroupWise and cloud integration
- ▶ 100% secure chat and file transfer is supported through all channels using end-2-end encryption
- ▶ Individually branded interface available

See who's available and where

With Komnicator the conversation is key not the platform where it happens. Using Komnicator's multi-channel presence information you start a chat or talk where your contact is available. Komnicator let's you connect to the right person at the right time.

Instant Messaging on many channels

Komnicator lets you connect to your accounts on multiple chat networks simultaneously. This means that you can be chatting with friends on Facebook, talking to a friend on Google Talk, and having a business discussion using Novell Messenger all at the same time. Komnicator lets you monitor and manage all of these chats at the same.

Secure your information

How do you keep your information secure when using one of the existing chat channels like Facebook or ICQ.

Very simple: click on the Komnicator secure chat icon and your data is immediately secured by a RSA-1024 system. Komnicator let's you use your favorite existing chat channels and still secure your data. During your secured chat your file transfers are also encrypted.

Komnicator is applying extreme security measures. A typical credit card or ATM card is secured by a 4- or 6-digit PIN code.

Komnicator secures its chat content with two PIN codes and each PIN code has the equivalent of 309 digits. Additionally, each chat uses different PIN codes. These security measures are currently impossible to hack.

Effective Team Communication

Komnicator's Group Chat feature enables you to create an instant messaging chat with participants from different communication platforms (Facebook, Google Hangouts, ICQ, Novell Messenger...). This allows your colleagues or friends to contribute to the conversation from what ever platform they are online on, even with a mobile phone.

And all of this contents can be saved and archived to your existing email platform or to the SKyPRO cloud.

Voice (Audio) over IP

Komnicator`s next generation SIP softphone client enables you to manage your communications easily and efficiently – all from your computer desktop. It supports a wide range of Voice over IP systems. Komnicator can connect to your VoIP/SIP accounts or to multiple VoIP PBXs at the same time. You can also connect Komnicator with your Lync/Skype accounts (Skype for Business). All call and communication information can be saved and archived.

Komnicator supports VoIP/SIP conference calls with up to seven participants. Often a conference call eliminates the need for "face-to-face" meetings. And by communicating through conferencing, you no longer need to make phone calls to many people.

A conference call enables fast brainstorming when immediate action is needed. You can solve your problems instantly.

A conference call is an indispensable "problem-solving" tool that is always readily available using Komnicator.

Integration creates compliance

Integration is a key element for enterprises. Komnicator integrates the entire communication history with Exchange or GroupWise. Additionally the complete history can be saved to the cloud, creating compliance on the go. Komnicator archives full instant messaging transcripts, records phone calls and saves all sent and received SMS/text messages if configured accordingly.

Social media monitoring and posting

Social Media platforms are more and more becoming hosts of conversations not only between friends but also between organizations and customers. Komnicator allows the usage of these newly emerging communication channels.

Monitoring

Komnicator can log in to your social media accounts on Facebook, LinkedIn, Twitter and Google+. The activity window will display your time lines and gives you the possibilities to like, save or re-tweet. The filtering feature allows you to customize the news feeds that you will see in the activity window.

Posting

Using Komnicator you can post simultaneously to several social media platforms. You can also schedule when and where you want to post your text, image or both.
